

TEAM G (DMJF)

Sprint 2 Retrospect

During the second sprint we focus and work in the creation and development of the Database in SQLite and the possible Graphic user interface.

What we did well:

- We created the Database for the project.
- We created and developed the classes for the project.
- We develop the GUI for the project.

We improved:

- Communication, every teammate updated and asked questions in our discord group.

To improve:

- Every member chooses a story to work on, we thought it will be good to get everything done and later combine our individually work but it did not turn out easy and looked like we are not working as a team, since some of us have GUI stories and others just code stories.
- We decided that work under different codes is difficult so we are working in get everything together.
